

Exporting: Angular

- ✦ Official package: @angular/elements
- ✦ Using outside Angular not officially supported (yet)
- ✦ Import `createCustomElement` and wrap Component
- ✦ Register with `customElements.define`

<https://angular.io/guide/elements>

Exporting: React

- ✦ No official package
- ✦ Several third party packages
 - ✦ **web-react-components**, react-web-components, skatejs
- ✦ Import and call `register()` with component, props, tag-name

My pick: <https://github.com/ChristophP/web-react-components>
